## MIRROR'S for H.E.M.M.'S

As Dumpers are very big in size, the operator is unable to see the front lower side of the dumper & this causes accidents. In order to avoid such accidents and for better and sharp view, D. G. M. S. recommends to install at least two Blind Spot Mirrors on operator's both side – Left & Right along with Rear View Mirrors.

**Blind Spot Mirror** is round in shape & of 12" Dia & Depth is not more than 2" for better and clear view. It is useful to see front bottom side of the dumper as well as front tyre also.

### Technical Details of Blind Spot Mirror

- It is made by unbreakable\* material.
- It's shape is convex for clear view.
- It has better clarity than Glass mirror.
- It is adjustable in any direction – Left , Right , Up or Down for better view.
- It is light weight for easy mounting.

**Side View Mirrors** are available in Two Sizes : 18" X 26" suitable for Right Hand Side & 12" X 18" suitable for Left Hand Side. This sizes give clear side view of the equipment to operator. These Mirrors are also made by unbreakable material & are light weight.

**Manufactured By : Enercon Systems, Indore ( M.P.)**

( The Technical Specifications can be changed for the Enhancement of the Mirror )
